## URAGAN® Fence Line Weed Control

URAGAN® is a pre-emergent soil residual herbicide that can be used for extended control of both grass and broadleaf weeds along fence lines, including glyphosate resistant weeds. It contains 800 g/kg bromacil and is ideal for use where control of hard to kill and resistant weeds are present; very good residual on fleabane and milk thistle and resistant ryegrass on fence lines. URAGAN® is highly compatible with non-selective knockdown herbicides allowing immediate control of existing weeds. Once in the soil, URAGAN® acts to control germinating weeds for up to 12 months reducing the need for multiple herbicide applications, making it an ideal tool for managing herbicide resistance.

For more information talk to your local North West Ag store.

## weedmaster® DST® is now registered for use OTT

Nufarm's weedmaster® DST® is now registered for use OTT (Over The Top) in glyphosate tolerant canola. It's a high performance product ideal for use year-round due to its wide range of use patterns, many of which are unique and unrivalled by any other glyphosate product.

weedmaster DST is:

- The only liquid glyphosate registered for OTT (Over The Top) canola use
- The only glyphosate registered for pre-harvest use in all canola systems
- Ideal for summer and fallow spraying

Why weedmaster DST?

- Outstanding performance on hard to control weeds
- Fast brownout
- One hour rainfastness when used with LI 700®

Contact your local North West Ag store for more information or pricing and availability of weedmaster® DST®.

## Sultan-SU medic from Heritage Seeds

We have been getting some inquiries for the latest SU medic from Heritage Seeds. Sultan-SU is an early flowering, aphid resistant barrel medic (*Medicago truncatula*) which is tolerant of sulfonylurea (SU) herbicide residues. It is the only barrel medic on the market with all of these key attributes.

Here are the key features:

- First barrel medic with tolerance to SU herbicide residues\*
- Early maturing (~ 70-90 days to flowering), similar to Caliph and Angel
- Caliph hybrid with improved regeneration
- Less hard seeded than Caliph (~ 85% cf 95%), similar to Jester
- Good aphid resistance (BGA & SAA)
- Boron tolerant.

For more information speak to your local North West Ag store.

## Brand New Insecticide

Cobalt Advanced Insecticide has recently been released from Dow AgroSciences.

Cobalt Advanced is a brand new insecticide/miticide for controlling earth mites, lucerne flea, cutworms, caterpillars, aphids, weevils and bugs in broadacre crops. It is approved for use in winter cereals, canola, pulses,

lucerne and legume-based or grass pastures.

Product features include:

- One product with two modes of action for broad spectrum control.
- Low in solvents, reduced risk to users.
- One product controls most crop establishment pests.
- Less handling, measuring and mixing required.
