Survive to Thrive Pre-Lamb Program – Every Ewe, Every Year.

Zoetis have introduced the new Survive to Thrive Pre-Lamb Health Plan to remind sheep farmers about the importance of vaccinating ewes with annual boosters of Glanvac and Eryvac, as well as controlling internal parasites with an effective drench, like Startect, pre-lambing.

As we move closer to autumn lambing, this pre-lambing time is a critical point in the annual calendar of a sheep operation. It is important that sheep farmers consider implementing a comprehensive pre-lambing ewe animal health program, in order to protect their ewes, as well as their lambs, and help get more lambs through to marking. Ewe vaccination pre-lambing is really important in order to ensure ewes have maximum immune protection at the point of lambing, but also to ensure that lambs are given the best kick-start in life, with strong colostral antibody protection passed from ewe to lamb in the first milk (colostrum). Minimising parasite load in ewes pre-lambing is also critical to ensure optimal performance from both ewes and lambs.

Speak to your local North West Ag store for more information on the program and ask about your vaccinating and drenching needs.

Advantage Feeders Distributors

It's time to start thinking about what equipment you need to supplement feed your livestock.

Advantage Feeders have an extensive range of grain and hay feeders.

They have just released a heavy duty range of grain feeders that are strong, durable, easy to use and flexible. These feeders come with an Advanced Adjustment System that allows you to control animal feed ration.

Advantage Feeders are now available to purchase in store, with the option of flat packed or fully assembled.

Speak to your local North West Ag store to find an option that suits your feeding needs.

Syngenta - Uniform available from key fertiliser suppliers

The introduction of UNIFORM provides an important change in the control of various cereal diseases in Australia, including Rhizoctonia.

Rhizoctonia ranks as the most important fungal root disease in southern and western regions of the cereal belt. Rhizoctonia is associated with losses of 5 to 20 per cent, and in individual paddocks can be as high as 50 per cent. Trials across three years and twelve sites have demonstrated positive economic

results by applying UNIFORM to Rhizoctonia affected paddocks (McKay et al 2014, Huberli et al 2015).

UNIFORM is a new in-furrow fungicide from Syngenta that provides the only fungicidal control of Rhizoctonia in Australian wheat & barley crops. UNIFORM reduces the incidence and size of Rhizoctonia bare patches as well as controlling the chronic effects that occur between patches across the paddock. These yield robbing chronic effects can account for up to 20 percent of yield loss (Rovira 2006).

ADDITIONAL BENEFITS

- Controls Rhizoctonia and Pythium
- Controls Stripe Rust
- Yellow Leaf Spot suppression
- Excellent return on investment through improved yield in affected paddocks

UNIFORM is applied in-furrow on granular fertiliser or in liquid (water or fertiliser). In Rhizoctonia affected paddocks, applying UNIFORM promotes a healthier root system enabling the plant to extract more nutrients and water.

Syngenta, and key fertiliser companies around Australia, have been actively collaborating over the past six months to establish a reliable fertiliser application platform to enable delivery of UNIFORM-treated fertiliser products to growers.

Speak to your local North West Ag store about which fertiliser companies have UNIFORM-treated fertiliser products available in 2016.

syngenta

Uniform
for uniforms

Syngenta is donating \$1 from every litre of UNIFORM sold to buy uniforms for your local team.

[Nominate your sport club](#)

It's a great way that you and your store can support a local club, and help your community.

[CLICK HERE](#) to find out more about the promotion or contact your local Syngenta sales representative.

- Controls Rhizoctonia and Pythium
- Controls Stripe Rust up to 100 days
- Yield advantages via disease control

....and Syngenta is donating \$1 from every litre of UNIFORM sold to buy uniforms for your local club. See instore for more details.

It's on again – Save the Date!

The Woomelang Lions Club is pleased to announce this year's Frenzy will be held on the 24th September 2016.
