Medics - the good old tried and tested varieties

Medics - the good old tried and tested dryland Mallee varieties. Look after them and they will just keep working for you - year after year! Benefits; great for nitrogen fixation and increasing organic matter in soils after the plant has seeded and died down. They can be sown early in your cropping program; out of the road.

Varieties available include:

- Bindaroo Button - Early Maturity
- Parabinga Barrel - Early maturity
- Caliph Barrel - Early/Mid maturity
- Parraggio Barrel - Mid/Late maturity
- Cavaleir Spinless Burr - Mid Maturity
- Jaguar strand medic - Early/Mid Maturity
- Silver Snail medic - Early/Mid Maturity

Why not call us for a quote on your own custom blend - nothing is too much trouble. Perhaps look to create a blend with slightly different agronomic characteristics, eg, maturity and hard seededness. Also look to inoculating medic seed with rhizobia.

We have access to a huge range of clover, lucerne and ryegrass varieties too numerous to mention and can supply tall wheatgrass and veldt grass - for regenerating reclaimed sandhills. Call us to discuss.

Cyclone introduces stronger N-Sure gates

Cyclone
Better farms start with Cyclone

Introducing
our strongest
N-Sure[®] ever

Australia's most popular gate, the N-Sure has been re-engineered to be our strongest N-Sure ever thanks to our patented Gusset technology.

Cyclone have redesigned their N-Sure gates so they are now stronger and more rigid than ever. The addition of their gusset technology means the gates will hang better with less sag.

In addition to the gusset design there will be more sizes available soon to choose from, including 18' and 20', as well as all odd sizes. Talk to your local North West Ag store for more information.

'Bush Tucker' from Neutrog

Following some 3 years in development, Neutrog is pleased to announce the autumn release of the revolutionary new native plant fertiliser '**Bush Tucker**'.

Developed in conjunction with garden media personality and native plant expert Angus Stewart, along with leading urban soil scientist Simon Leake, Bush Tucker is a complete, organic based boosted fertiliser specifically developed to meet the specialised needs of *all* Australian Native Plants.

Utilising a unique process, trace elements have been added to lock up phosphorus, making Bush Tucker ideal for *even the most phosphorus sensitive plants* such as Grevilleas, Banksias and Proteas.

Ask for Bush Tucker at your local North West Ag store.
