NEW registration BOXER GOLD - Early Post-em

BOXER GOLD is now registered for early post-emergent application in wheat and barley to suppress Annual Ryegrass.

BOXER GOLD continues to be the most flexible solution for Annual Ryegrass control with its new registration providing growers an alternative post-emergent control option, especially important for growers with Group A and Group B resistant Annual Ryegrass.

Syngenta has conducted numerous replicated trials investigating the performance of BOXER GOLD® when compared with key competitors such as trifluralin and Avadex Xtra*. In these trials BOXER GOLD provided greater and more consistent control of the Annual Ryegrass present, Group D resistant or not, when compared with these key competitors.

Early post-emergent (EPE) application of BOXER GOLD can provide reliable control levels when applied with good crop and soil moisture conditions. It provides good suppression of surviving plants by reducing panicle numbers and therefore seed-set.

BOXER GOLD can be applied 2.5 L/ha early post emergent in wheat and barley only, at the 1–3 leaf stage for Annual Ryegrass and no later than GS25 of the crop. BOXER GOLD is compatible with a range of broadleaf herbicide options.

The use of BOXER GOLD is intended to be part of an integrated weed management strategy that includes varied means to reduce weed survival and seed set. BOXER GOLD applied preemergent IBS will provide the most consistent performance of Annual Ryegrass control.

When applied EPE, BOXER GOLD can be used strategically to target problem paddocks, however, EPE application should not be the primary means of Annual Ryegrass control. Surviving plants not controlled by BOXER GOLD may be stunted and uncompetitive but may still set seed.

Talk to your local North West Ag store about using BOXER GOLD in your cropping program.

FarmTalk on website

All editions of FarmTalk released this year can now be accessed on the North West Ag Services website. Looking for an article from a few editions back, or just catching up, click on the News tab to access them all.
